

LAUNDRY PRO 2.0[®]

A BEYOND BY AERUS TECHNOLOGY

UNIQUE FEATURES OF THE LAUNDRY PRO 2.0

Cleans clothes beyond clean
Eliminates the need for detergents & fabric softeners
Eliminates odor-causing bacteria without bleach
Eliminates the need for hot water
No allergic reactions from detergent residue
Keeps colors brighter and whites whiter
Towels are softer and fluffier and clothes last longer
Leak detection circuit
Earth-friendly and saves you money
Metal construction
Designed, engineered and made in the USA for reliability and durability

Frequently Asked Questions (FAQs):

Does the Laundry Pro 2.0 get out tough stains without pretreating?

Tough or set in stains could still require some type of pretreatment.

Does Laundry Pro 2.0 work with all types of water, ie. hard water?

Laundry Pro 2.0 will work with all household water qualities, however additional sediment pre-filtering may be necessary depending on the source water condition.

NOTE: Never use with a carbon filter. Only use a sediment pre-filter as needed.

Will the Laundry Pro 2.0 work on commercial washing machines?

The Laundry Pro 2.0 is designed for residential use only – commercial units have a larger capacity with larger water inlets, and the inlets used for residential capacities are too small for commercial applications. The Laundry Pro 2.0 will not allow enough water to pass through to the washer, which will affect its cleaning ability.

Can I connect the Laundry Pro 2.0 unit to anything other than a washing machine?

The Laundry Pro 2.0 is designed to connect to residential washing machines only.

What effect does the Laundry Pro 2.0 have on elastic?

The Laundry Pro 2.0 does not reduce the life of elastic in clothing with normal operation.

Can I let my clothes soak overnight?

It is not recommended that clothes be left to soak overnight in any water source.

Is the Laundry Pro 2.0 only used for top load washing machines or can it also be used with front load washing machines?

The Laundry Pro 2.0 is designed for use on both top and front load style units.

Does the Laundry Pro 2.0 require a plumber for installation?

The customer is responsible for installation of the unit. Some customers may prefer to have a plumber perform the installation – the Laundry Pro 2.0 can be installed in most homes using standard hand tools.

Since installing the Laundry Pro 2.0, my top load washer has developed a musty smell inside. What is going on?

Washing machine odors may have two main sources: mold or mildew in the tub or poor source water. Detergents and fabric softeners contain chemicals and fragrances that build up over time and can mask those odors. Since the Laundry Pro 2.0 does not use detergents or chemicals, those odors are no longer covered up. The problem is not new but is just now becoming apparent. The Laundry Pro 2.0 is actually beginning to clean the inside of the washing machine as each cycle runs.

What makes the Laundry Pro 2.0 different than similar, cheaper products I've seen on the market?

Most of these products are made in China, hence the lower cost. As the Laundry Pro 2.0 is made in the USA, it is a higher quality and more dependable unit. Many of these competitor products are knockoffs of our first generation Laundry Pro unit that pioneered the soap-free industry. However, we have made many improvements to the machine's design and function over the last 5 years to ensure the best performance.

My washer requires water to flow through the hot and cold valves to operate. Can I still use the Laundry Pro 2.0?

Yes. You will need to buy a "Y adapter" (available at most hardware stores) and install it as directed in the Laundry Pro 2.0 Owner's Manual.

My washing machine monitors the temperature of the water and regulates it by adding hot water if the water is too cold. Can I still use the Laundry Pro 2.0?

Yes. You will install the Laundry Pro 2.0 normally, but keep the hot water valve open.

The ActivePure[®] Technology built into each Laundry Pro 2.0 is based on a variation of the technology originally developed for use on the International Space Station and is recognized as the exclusive Certified Space Technology in its category.
